Landscape Attributes

Ketchup And Mustard Rose is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This shrub will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting bees to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spiny

Ketchup And Mustard Rose is recommended for the following landscape applications;

Wolf Hill Ipswich
60 Turnpike Rd (Route 1)
Ipswich, MA 01938
978-356-6342

Wolf Hill Gloucester
104 Eastern Ave
Gloucester, MA 01930
978-281-4480

- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Ketchup And Mustard Rose will grow to be about 3 feet tall at maturity, with a spread of 3 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
